

Best-Selling Books Analysis Report

Amazon Bestseller Dataset | 2023-2025 | Excel Dashboard-Based Analysis

Executive Summary

This report presents a descriptive and exploratory analysis of 210 Amazon bestseller titles from 2023 to 2025. The updated dashboard summarizes the market through six core indicators: total books, average rating, average price, leading format, top genre, and quality benchmark.

The analysis shows a quality-driven bestseller market where Paperback is the leading format with 106 books and a 50.5% share, while Fiction & Action & Adventure is the strongest genre with 55 books. The average rating remains high at 4.7 and the average price is \$12.47. Review engagement is highly concentrated among a small number of author brands, led by Freida McFadden with 2,808,693 reviews. These findings support practical decisions related to inventory planning, category promotion, author-based campaigns, and rating-based title selection.

Business Objectives

- Evaluate bestseller market performance across book count, format, price, genre, author engagement, and rating quality.
- Identify formats and genres that show the strongest reader demand and market concentration.
- Compare pricing patterns across book formats to support inventory and promotional decisions.
- Translate dashboard results into measurable business insights with clear actions and review timelines.

Dataset Overview

Dataset Attribute	Value
Total Records	210 books
Time Span	2023-2025
Unique Authors	153
Genres Covered	21
Analysis Type	Descriptive and Exploratory Analysis
Tool Used	Microsoft Excel

Data Cleaning and Analytical Techniques

- Converted the dataset into a structured Excel table for consistent pivot analysis.
 - Standardized fields such as format, genre, author, rating, price, and review count.
 - Created dashboard-ready segments including rating category and format-based grouping.
- Used pivot tables, contribution percentage analysis, comparative pricing analysis, segmentation, and descriptive statistics.

Analytical Techniques Applied

- Pivot Table Analysis
- Contribution Percentage Analysis
- Comparative Pricing Analysis
- Segmentation Modelling
- Descriptive Statistics

KPI Metrics Summary

Total Books 210	Average Rating 4.7	Average Price \$12.47
--------------------	-----------------------	--------------------------

Leading Format Paperback - 106 books / 50.5% share	Top Genre Fiction & Action & Adventure - 55 books	Top Author by Review Count Freida McFadden - 2,808,693 reviews
---	--	---

Dashboard

	The top four genres together contribute 127 books, or approximately 60.5% of the dataset.
Business Interpretation	Reader demand is concentrated in a few strong categories. Fiction & Action & Adventure is the primary demand driver, while Reading & Writing acts as a strong secondary category. The concentration among top genres shows where publishing and promotional attention should be focused.
Recommended Action	Allocate higher promotional visibility to Fiction & Action & Adventure and Reading & Writing. Use Arts/Music/Photography and Mystery/Thriller/Suspense for targeted campaigns instead of treating all genres equally.
Review Timeline / Target	Review genre-wise performance monthly and evaluate category-level campaign results at the end of each quarter.

3. Author Review Engagement

Dashboard Evidence	Freida McFadden leads with 2,808,693 reviews, followed by Sarah J. Maas with 2,260,824 reviews, Colleen Hoover with 1,995,627 reviews, and Rebecca Yarros with 1,156,263 reviews. The top four authors together generate approximately 8.22 million reviews , representing about 76.0% of the top-10 author review volume shown in the dashboard.
Business Interpretation	Review engagement is highly concentrated among a small group of author brands. This shows that bestseller visibility is strongly influenced by author recognition, reader loyalty, and social proof, not only by rating score.
Recommended Action	Create author-led promotional campaigns such as bundle offers, homepage features, series promotions, and special-edition highlights for the highest-review authors. Use high-rated but low-review authors for Hidden Gems campaigns.
Review Timeline / Target	Run author-focused promotions in the next campaign cycle and track review-driven engagement monthly.

4. Reader Sentiment and Quality Benchmark

Dashboard Evidence	The dashboard shows an average rating of 4.7 . The rating band chart now totals 210 books: 127 books in High, 68 in Medium, and 15 in Low . This means 60.5% of books fall in the High rating category, 32.4% in Medium , and 7.1% in Low .
Business Interpretation	The bestseller list is strongly skewed toward higher-rated titles. A high rating category can be used as a practical quality filter, but review count should be checked along with rating to confirm actual reader engagement and market visibility.
Recommended Action	Use the High rating band as the preferred quality shortlist for promotions. Prioritize books that combine high ratings with strong review counts. For high-rated but low-review books, improve visibility through recommendations and curated campaigns.
Review Timeline / Target	Refresh rating-band analysis monthly and review books below the quality benchmark before each quarterly promotion cycle.

5. Overall Market Direction

Dashboard Evidence	The dashboard combines 210 books, an average rating of 4.7, an average price of \$12.47 , a leading format of Paperback with 106 books , and a top genre of Fiction & Action & Adventure with 55 books .
Business Interpretation	The bestseller market is quality-driven, format-sensitive, genre-concentrated, and author-influenced. Strong performance depends on the combined effect of accessible formats, high-demand categories, trusted author brands, and reliable reader ratings.
Recommended Action	Use the dashboard as a decision-support tool for four areas: inventory planning, price positioning, genre promotion, and author-based marketing. Continue tracking format, price, genre, rating, and review count together rather than separately.

Review Timeline / Target	Review KPI cards monthly and refresh the full dashboard every quarter to keep the report aligned with updated market patterns.
---------------------------------	--

Business Recommendations

- Maintain **Paperback** as the primary inventory focus because it leads the format mix with **106 books and 50.5% share**.
- **Promote Hardcover** selectively as a premium format because it remains **the second-largest** format **with 84 books and an average price of \$13.10**.
- **Prioritize Fiction & Action & Adventure** because it contributes **55 books** and represents the strongest genre in the refreshed dashboard.
- Use author-led campaigns for high-review authors such as Freida McFadden, Sarah J. Maas, Colleen Hoover, and Rebecca Yarros.
- Use the High rating category as a quality filter, but validate popularity using review count before promotional decisions.
- Keep quarterly dashboard refreshes to ensure the report remains aligned with the cleaned and updated data source.

Limitations

- The dataset includes bestseller titles only and does not represent the full book market.
- Review count is used as an engagement proxy and should not be treated as actual sales volume.
- The analysis does not include regional, demographic, inventory-cost, or profit-margin data.
- Dashboard insights depend on the completeness and consistency of fields such as Format, Rating_Category, Genre, Price, and Review Count.

Conclusion

The refreshed Amazon Bestseller analysis for 2023-2025 shows a high-quality and engagement-driven market. Paperback leads the format mix with 106 books and 50.5% share, while Fiction & Action & Adventure is the strongest genre with 55 books. The overall average rating of 4.7 confirms strong reader satisfaction, and the rating band distribution shows that 127 books fall in the High category.

Author engagement remains highly concentrated, with Freida McFadden, Sarah J. Maas, Colleen Hoover, and Rebecca Yarros generating approximately 8.22 million reviews among the top author group. From a business perspective, the strongest strategy is to combine format, genre, rating, price, and review-count insights. Retailers and publishers should prioritize Paperback stock, promote high-demand fiction genres, use author-led campaigns for high-review authors, and apply rating-band analysis as a practical quality filter.
